

Research Result Report
ICRR Inter-University Research Program 2022

Research Subject: Pressure Validation and Characterization of Underwater Detector Components
Principal Investigator: Patrick de Perio
Participating Researchers:
Summary of Research Result : The funding for the pressure vessel could not be secured from IPMU, and thus this project has been postponed indefinitely. This project only requested space, so no funds were committed by ICRR. We will instead consider the refurbishment and possible relocation of the Kamioka Lab-F pressure testing facility in the future.
